

## **1 Historical Perspectives on Human Patient Research**

Introduction

The Nuremberg Doctors Trial of 1946

The Milgram Study

Thalidomide tragedy

The Study of Untreated Syphilis in the Negro Male

Human Radiation Experiments

The University of Pennsylvania Gene Transfer Experiment

The TeGenero Phase I Trial

Conclusion

## **2 Ethics and Federal Regulations**

Introduction

The Belmont Report

Basic principles of the Belmont Report

Federal regulations

## **3 Roles and Responsibilities of Institutions in Human Subject Research**

Introduction

Federal agencies

Good Clinical Practice

## **4 Roles and Responsibilities of the Investigator and the Study Process**

Introduction

Study process

## **5 FDA-Regulated Research**

Introduction

Drugs and biologics/INDs

Sponsor responsibilities in FDA-regulated research

The study process for industry-sponsored studies

Responsibilities of the investigator-sponsor

Sponsor–investigator–institution interaction Issues

References:

## **6 Behavioral Research Issues**

Introduction

Federal regulations

Types of IRB review

Research risks

Vulnerable subjects

Informed consent

Deception

Conclusion

Resources

Professional organizations

## **7 Publication of Study Results**

Introduction

Lessons to be learned from these cases

The data

Withholding data

## **8 Conflicts of Interest in Research**

Introduction

Financial conflict of interest

## **9 Informed Consent—Beyond the Basics**

Introduction

Context

Vulnerable subjects

Additional consent considerations

Conclusion

## **10 Community-Based Qualitative Research**

Introduction

Defining community-based qualitative research (CBQR)

Maintaining confidentiality

Study methods

Disenfranchised populations

Further resources

## **11 Ethical Issues in Genetic Research**

Introduction

Federal and state regulations

Genetic research and genetic testing

Behavioral genetic studies

Special considerations in protocols and consent forms

Gene transfer research

## **12 Special Ethical Concerns in Clinical Research**

The use of placebo

Data Monitoring Committees

## **13 Participant Recruitment and Retention in Clinical Trials**

Introduction

Education of potential participants

Why patients join clinical trials

Recruitment of special populations

Recruiting study participants

New strategies for subject recruitment  
Participant recruitment/retention incentives  
Recruitment strategies by sponsors  
Setting the proper tone in recruiting patients  
Conclusion

## **14 Research with Secondary Subjects, Tissue Studies and Records Reviews**

Introduction  
Secondary subjects  
Research involving human tissues  
Research involving record reviews  
References:

## **15 Implementing the HIPAA Privacy Rule in Research**

Introduction  
Entities regulated by the Privacy Rule  
Categories of information under the Privacy Rule  
General requirements for uses and disclosures of PHI  
Uses and disclosures of PHI for research  
Authorizations to use or disclose PHI for research  
Waivers of authorization  
Reviews preparatory to research  
PHI of deceased persons  
Use or disclosure of limited data sets  
Patient screening  
Patient recruitment  
Research databases and repositories  
Breach notification requirements, liability and enforcement  
Conclusion

## **Appendix A References, Resources and Suggested Readings**

## **Appendix B The Belmont Report**

## **Appendix C Title 21—Food and Drugs**

Part 11—Electronic Records; Electronic Signatures

Part 50—Protection Of Human Subjects

Part 54—Financial Disclosure by Clinical Investigators

Part 56—Institutional Review Boards

Part 312—Investigational New Drug Application

Part 314—Applications for FDA Approval to Market a New Drug

Part 600—Biological Products: General

Part 601—Licensing

Part 610—General Biological Products Standards

Part 812—Investigational Device Exemptions

Part 814—Premarket Approval of Medical Devices
